

The University of Manchester

Key Strategic Transport Projects

Overview

TPS have recently supported The University of Manchester to deliver two key strategic projects.

TPS undertook a review of all existing EV infrastructure across the main campus locations and prepared a strategy to future proof provision, deliver a fair and robust user policy and worked with external stakeholders to explore options for additional charging points. TPS also assessed the financial implications of different models of delivery – both in terms of installation costs and also user charging.

Following this, TPS delivered the 2022 travel survey amongst staff and students. This included the development of marketing materials, running engagement events and the analysis of the findings. We also completed the carbon assessment of day to day commuting and student arrivals and departures (including international students) for the University.

- Key Skills & Expertise**
- Staff and student travel survey – design, set up and analysis.
 - Stakeholder engagement.
 - Graphic design and marketing/communication support.

- Key Outcomes & Deliverables**
- Report on travel survey findings.
 - Carbon assessment of student travel including international travel.
 - EV charging policy.

Key Client Contact Julia Durkin, Sustainability Manager.

Project Timeframe 2021 – 2022.
